

Asif Siddiqui

Software Engineer | Full-Stack & AI/ML | Systems Programmer

+91 9834906417 sasifali363@gmail.com linkedin.com/in/asifsiddiqui github.com/Asif68113156

Professional Summary

Software Engineer and MCA student (2027) with hands-on experience in **full-stack development**, **Java backend development** with **REST APIs**, **AI/ML**, and **systems programming**. Delivered four end-to-end projects spanning **real-time concurrent systems**, **healthcare image classification**, accessibility technology, and **OS-level deadlock detection**, plus a six-month internship building **Streamlit** data dashboards.

Experience

Syntecxhub

Jan 2026 – Jun 2026

Software Development Intern (Virtual)

Remote

- **Built** an interactive **Streamlit** dashboard in **Python** for real-time visualization and exploration of datasets, with dynamic charts, filters, and summary metrics.
- **Developed Pandas** data-processing logic to clean, transform, and structure raw datasets for accurate, efficient dashboard rendering.
- **Collaborated** with a distributed remote team using **agile** practices, delivering features iteratively with **code review**.

Technical Skills

Programming Languages: Java, Python, JavaScript (ES6+), SQL

Frontend: React.js, HTML5, CSS3, WCAG 2.1 Accessibility

Backend: Java, Spring Boot, RESTful APIs, Concurrent Systems

Data & Visualization: Streamlit, Pandas, PostgreSQL, Query Optimization, Data Analysis

AI / ML: Supervised Learning, Image Classification, Data Augmentation, Real-Time Inference

CS Core: Operating Systems, DBMS, Computer Networks, Data Structures & Algorithms, System Design

Projects

Accessibility Friction Radar | *React.js, Java, PostgreSQL, Geolocation API, Crowdsourcing*

- **Architected** a crowdsourced geo-reporting platform for persons with disabilities to flag broken public facilities (ramps, accessible toilets, tactile paths) across **3** disability categories.
- **Engineered** a severity-scoring algorithm ranking **100+** report types by frequency, location density, and affected disability group, cutting NGO/municipal triage time by an estimated **60%**.
- **Built** a **WCAG 2.1**-compliant UI with screen-reader support, high-contrast mode, and voice input.

AI Proctoring & Monitoring System | *Java, React.js, REST APIs, Real-Time Processing, Concurrency*

- **Designed and deployed** a real-time AI proctoring engine handling **50+** concurrent exam sessions with under **1-second** anomaly detection latency via an event-driven architecture.
- **Built** a **multithreaded Java** backend exposing **RESTful APIs** and a **React** frontend streaming live video analysis; automated cheating-event flagging reduced manual invigilation overhead by **~40%** at **99%+** uptime.

Leukemia Blood Cancer Detection System | *Python, Machine Learning, Image Classification, Healthcare AI*

- **Trained** a **CNN**-based blood smear **image classification** model with data augmentation and class-imbalance correction, achieving **92%+** detection accuracy.
- **Built** a preprocessing pipeline that improved generalization by **~18%** over baseline.

Deadlock Kernel Detection System | *Java, OS Internals, Banker's Algorithm, Graph Theory*

- **Implemented Banker's Algorithm** and resource-allocation graph cycle detection with **$O(n^2)$** time complexity.
- **Reduced** simulated CPU detection overhead by **~35%** using event-triggered graph traversal instead of naive polling.

Education

Pimpri Chinchwad College of Engineering, Pune

2025 – 2027

Master of Computer Applications (MCA)

CGPA: 7.7

Prof. Ramkrishna More College, Akurdi, Pune

2022 – 2025

Bachelor of Computer Applications (BCA)

CGPA: 8.36

Achievements

- **3rd Rank**, National Level Entrepreneurship Competition — top 3 nationally for technical product ideation and execution.
- **1st Rank**, College Project Competition — recognized for engineering depth, real-world applicability, and presentation quality.
